# MAVES Cloud

September 22, 2020

Presented by Lee Finkelstein

"All you need is a laptop or a phone, to access your WMS from anywhere! Gone are the days of physical hardware, firewalls, routers and connections, we take care of that offsite. You take care of growing your business" -- Sonia Bahri

# What is Cloud Computing?

Cloud computing is the delivery of computing services servers, storage, databases, networking, software, analytics, intelligence and more—over the Internet (“the cloud”) to offer faster innovation, flexible resources, and economies of scale.

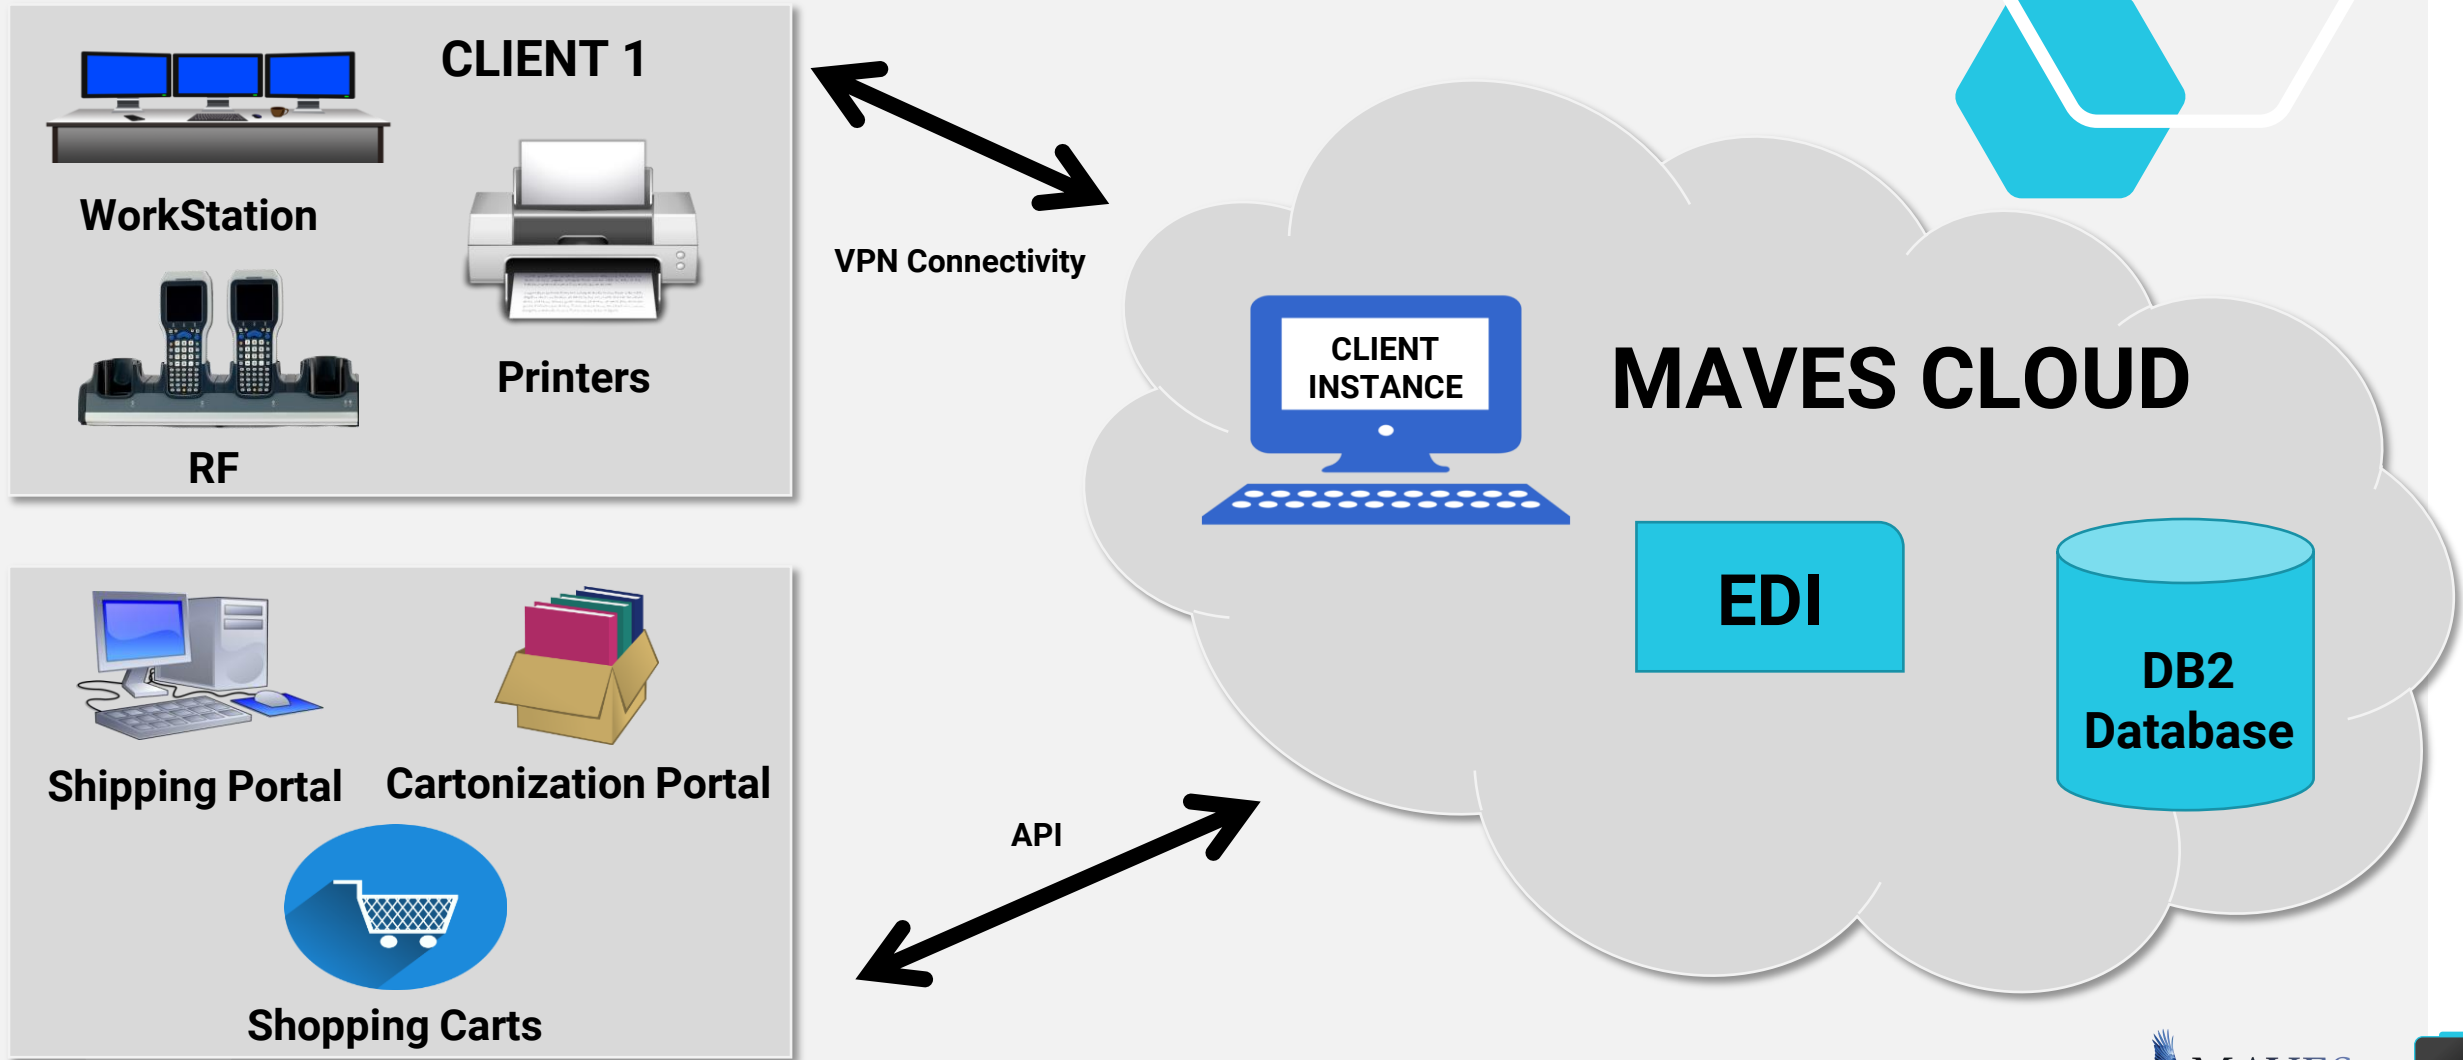

71% of businesses are deploying Cloud based SaaS to enhance IT service delivery speed

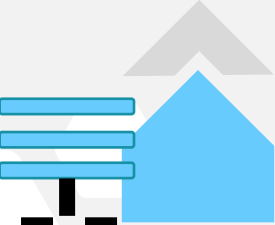

# MAVES Cloud Architecture

# Difference between On-premise and MAVES Cloud Computing

	Accessibility	Updates	Cost
 MAVES Cloud software	Access through web application.	Automatic updates.	No additional hardware required
 On Premise software	Limited to the device initially installed on.	Locked in features.	Cost related to new hardware and replacing out-dated equipment.

# Cloud Computing

Virtual  
Desktop

Software  
Platform

Applications

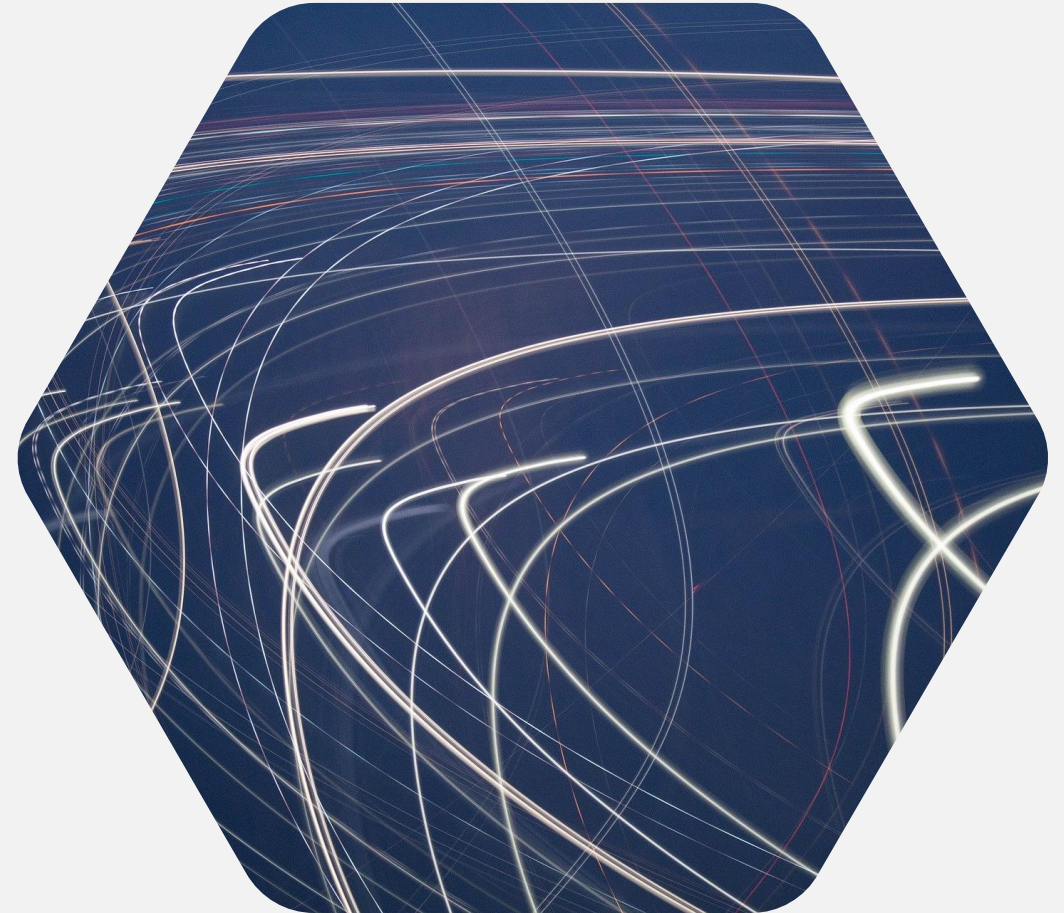

Data

According to Jamal Mazhar, Founder and CEO of Kaavo, a pioneering cloud-computing management company: "Cloud computing is empowering, ... anyone in any part of the world with an internet connection and a credit card can run and manage applications in state-of-the-art global datacenters; companies leveraging cloud will be able to innovate cheaper and faster."

# Faster Migration

- Faster deployments.
- Little or no upfront hardware capital investments.
- Application can start running in weeks to months.
- Easy and faster migration of data from your existing system to cloud server.

# Maintenance Free

- MAVES Cloud gets automatic updates of features and new functionalities at scheduled intervals.
- You are no longer faced with choosing between obsolete software and high upgrade costs.
- No additional IT personnel costs to maintain on-premise hardware infrastructure.

# Disaster Recovery

- MAVES hosted on GOOGLE CLOUD provides 99.99% Uptime.
- MAVES implements nightly virtual snapshots to protect against program or data loss due to any errors.
- In case of a rare event of loss of programs or data the client can expect to be back up and running in less than 30 minutes.

# Benefits of MAVES Cloud

- **Cost** - It eliminates the expense of buying hardware
- **Scalability** - Easy to scale up the cloud capacity
- **Accessibility** - Easy to access data anywhere
- **Security** - With cloud, your data is stored in a centralized secure location using SSL certification.

# Cloud Journey

## Plan

- Understand strategic direction
- Analyze workloads
- Define architecture
- Business processes

## Build

- Design and Construct
- Quality Assurance (Test)
- Security and Compliance

## Deliver

- Deploy
- Train
- Manage

## **Invest in your digital platform today!**

Let MAVES show you how to invest in the right areas of your business. Reach new customers, Increase Sales, Make more Profit!

MAVES Cloud - Enable your warehouse to do more!
